

TAKE THE LEAD

Press Release

June 4, 2019

## **Axxès, the French electronic toll issuer for HGVs arrives on the German market**

Axxès, which is in the process of certifying its satellite OBUs on the LKW Maut network, is presenting its solution at TRANSORT LOGISTIC in Munich from June 4 to 7.

Axxès has taken another important step forward in the development of interoperability in Europe by getting involved in tests with the B.A.G - BundesAmt für Güterverkehr, the German public body in charge of managing the LKW MAUT network - to make its OBUs interoperable with the German toll network.

In other words, from this summer, the Axxès solution will be tested on a full-scale in Germany and its offer will be accessible to carriers to travel there.

Frédéric Lepeintre, CCO, comments: "The ongoing tests with the B.A.G. are materializing our project to open up Germany, which our customers have been waiting for so long. We are delighted to position ourselves as an alternative offer to the German national issuer via our solution for the collection of the LKW Maut. »

With its new ambition, Axxès is more than ever confirming its position as a major player in the market for interoperable electronic toll systems for freight and passenger carriers over 3.5 tonnes.

Germany would thus be added to the large network of countries already interoperable with the Axxès system, namely: France, Spain, Portugal, France, the Liefkenshoek tunnel and the Viapass network in Belgium, the Herrentunnel in Germany and Austria. At the same time, Axxès is in the process of certifying its OBU on the Italian network.

### **An intelligent interoperable electronic toll solution**

To complement its interoperability services, Axxès has developed its own real-time monitoring and fleet management solutions. Its new Axxès Fleet Manager application enables customers to optimise and monitor their transport operations throughout Europe.

Finally, the boxes and the Axxès system are compatible with vehicle data reporting services, to facilitate the daily life of fleet managers.

These services, which are complementary to toll payment, are accessible from the Axxès digital platform. Over time, new modules will be developed and new services will be added soon. The Axxès digital platform will also be open to partner services to provide customers and business partners with a service console, unique in Europe, combining toll and optimization services.

## **Axxès: a leading actor in interoperable electronic toll system for HGVs and first EETS provider**

Founded in 2005, following the European directive that created the European electronic toll service (EETS), Axxès quickly became an essential player on its market. Thanks to its innovative solutions that are well adapted to users' needs, almost 40,000 customers currently use more than 325,000 tags in active service.

Axxès currently distributes its products locally through some 50 business partners in the main European countries.

Axxès is also a certified EETS provider, a fact that facilitates the formalities required to deploy interoperability on a European scale, but also recognizes the company's technical expertise, the reliability of its hardware, the solidity of its financial system and an organisation that is optimised to receive toll payments.

### **Axxès the pioneer**

- Axxès was the first HGVs toll provider in Europe to establish interoperability with Spain in 2009.
- The first toll provider to obtain EETS certification in 2015.
- The first EETS provider to establish interoperability in Belgium on the Viapass network at the same time as the national service provider.

### **Axxès, a turnkey European tolling service**

Axxès is the exclusive owner of its solutions and, therefore, of its EETS platform, which already benefits from 6 years of feedback.

This platform, which opens up the way for interoperability throughout Europe, offers:

- A very high level of expertise among Axxès teams, combined with perfect market knowledge
- Personalised support for the establishment of protocols between the toll chargers, distributors and Axxès.
- Well renowned technical partners:
  - > Bemobile, for its know-how in the realms of cards and mobility.
  - > Kapsch, for its robust OBUs

The Axxès EETS platform is a turnkey solution that enables market players to offer the best electronic toll collection services, connected to onboard telematics.

With its motto "One box and one contract for the whole of Europe", Axxès is aiming to become the standard-setter for interoperable European electronic tolling and an essential partner for road hauliers.
